too far away....

STORMWATER WARS

Episode IV A NEW HOPE

It is a period of climate extremes. Major weather systems, striking without warning, have struck fear in the hearts of citizens across the galaxy.

Floodplain managers, in a vain attempt to tame the very forces of nature, are secretly devising a strategy to manage flood risk where it's needed most and where it will matter most.

Pursued by the Empire's sinister agents, an engineer from the Urban Drainage and Flood Control District in Denver has been dispatched to the ASFPM Conference to share their secret strategy...

Discrepancies with “n” Values – in the Field and in Designs

Case Studies of Mapped Risk vs. Actual Risk

Case Study Conclusions

- **Vegetation Can Dramatically Increase Flood Depth and Width, but Context Matters**
- **Confined Channel Sections ~ More Risky**
- **Flatter Channel Sections ~ More Risky**
- **Freeboard Matters!**

**Account for Realistic Vegetation in Design
~and/or~**

Plan to Manage the Vegetation

GIS Applications

- **Document “n” Values**
- **Understand Hydraulic Sensitivity to Changes in Vegetation**
- **Assess Field Conditions – How do They Compare to Model Assumptions?**
- **Identify Stream Reaches with the Highest Flood Risk**

Documenting “n” Values

Documenting “n” Values

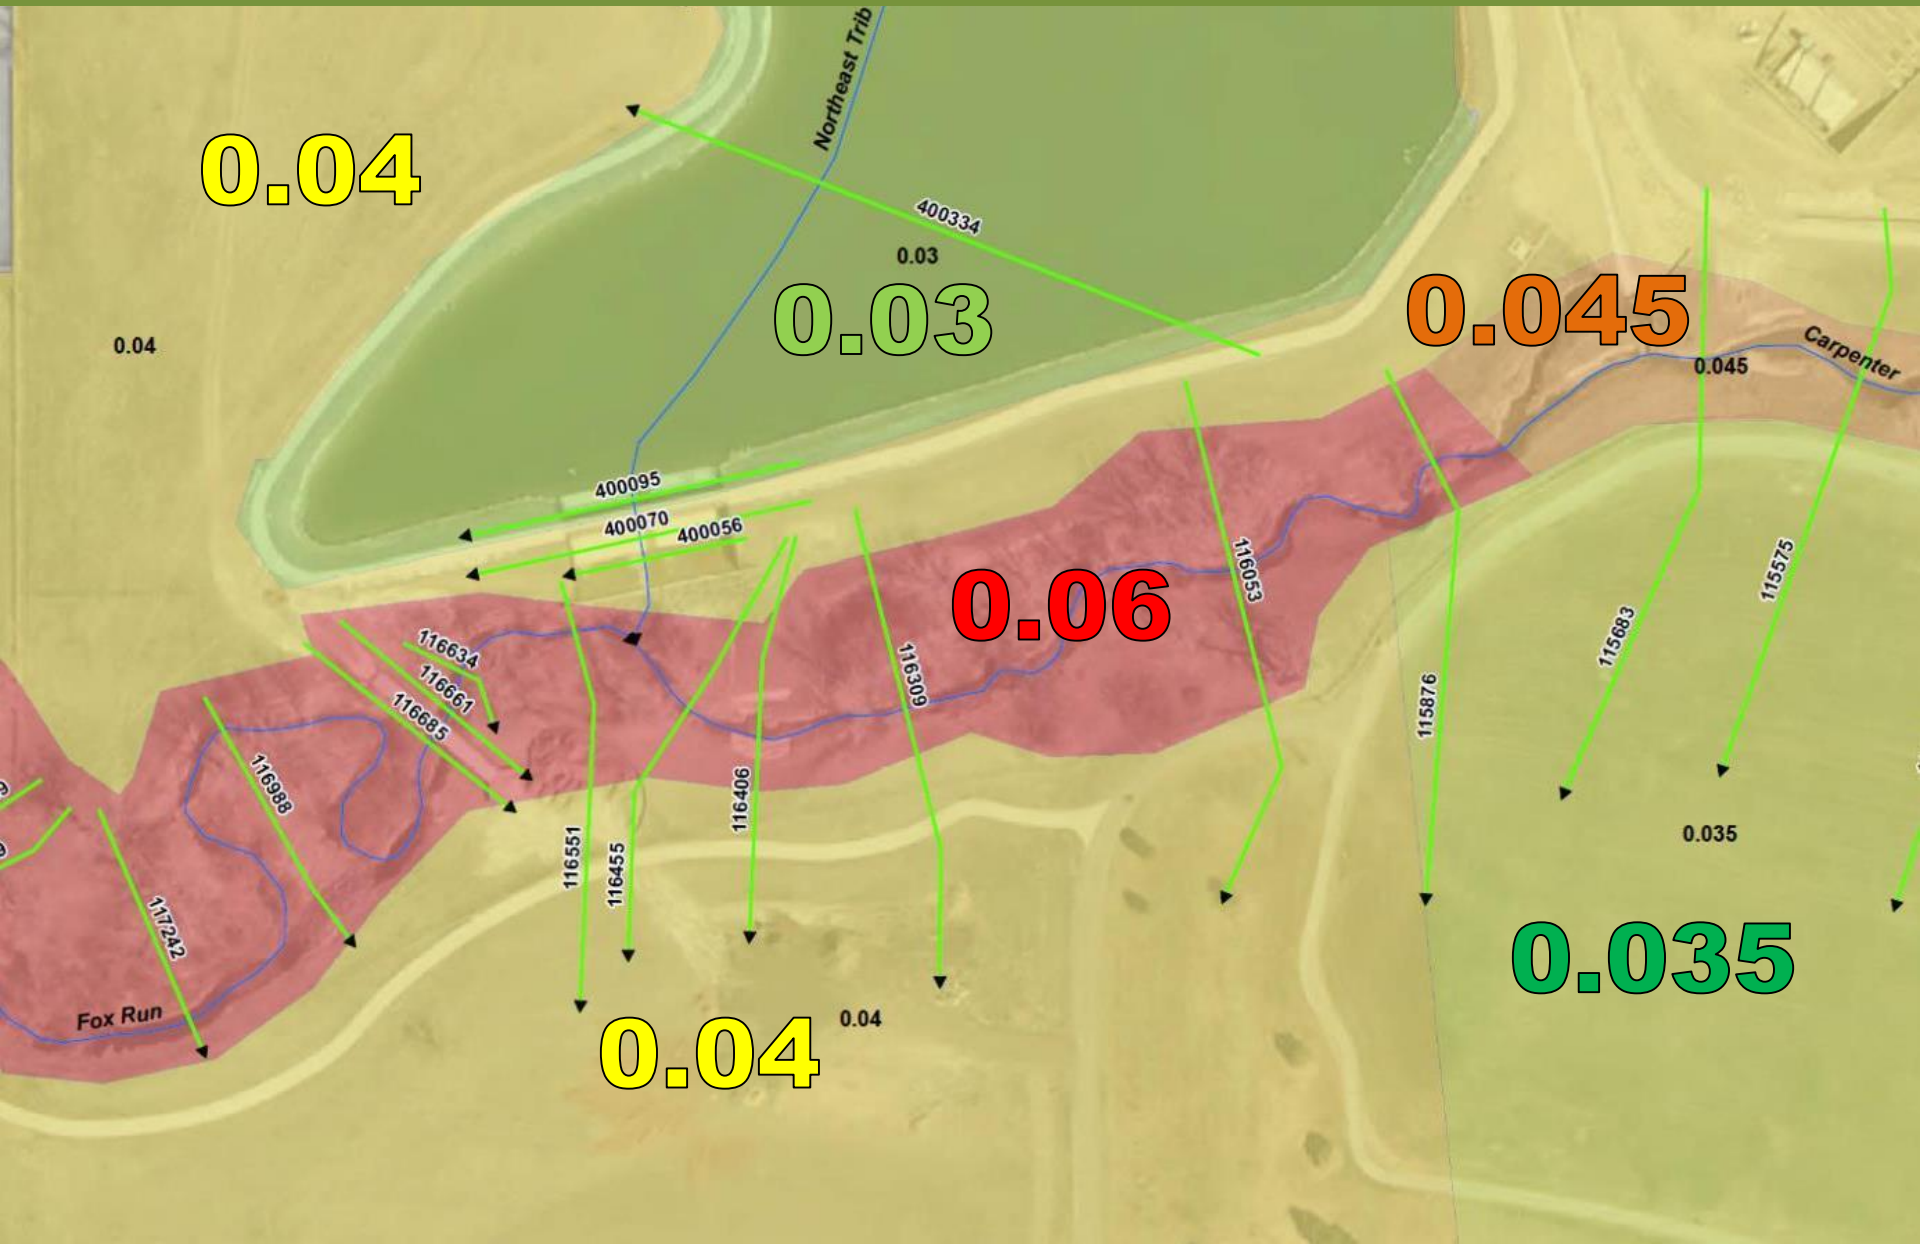

Documenting “n” Values

This aerial map illustrates a waterway system with various flow paths and associated 'n' values. The map includes the following features:

- Flow Paths:** Indicated by blue arrows showing the direction of water flow.
- 'n' Values:** Numerical values representing roughness coefficients, color-coded by range:
 - 0.02 (Green):** 400095, 400070, 400050, 400334
 - 0.03 (Yellow):** 116455, 116406, 116309, 116053, 115876, 115683, 115575, 116988, 117242, 117459
 - 0.04 (Yellow):** 116661, 116634, 116551, 116406, 116309, 116053, 115876, 115683, 115575, 116988, 117242, 117459
 - 0.06 (Red):** 116661, 116634, 116551, 116406, 116309, 116053, 115876, 115683, 115575, 116988, 117242, 117459
- Geographic Labels:** "Northeast Trib" and "Fox Run" are labeled on the map.
- Flow Direction:** The flow is generally from the top-left towards the bottom-right, with some local variations.

“n” Sensitivity - Scenarios

The background is a topographic map with contour lines and elevation markers. Overlaid on the map are several engineering features: a blue line representing a waterway or boundary, a red dashed line, a purple dashed line, and several red solid lines. A black hatched rectangular area is located in the center-left. Numerous numerical labels are scattered across the map, including 47200, 47355, 47455, 47590, 47650, 47731, 47844, 47950, 48067, 48154, 48255, 48366, 48400, 48527, 48627, 48727, 48827, 48927, 49027, 49127, and 49200. A text box in the upper right corner contains the following text:
